### 6.1.4. - How to exit from the configuration mode

To load the factory default parameter set, proceed as follows:

1. Press the MENUS button for more than 5 seconds
2. The display will show alternatively "PASS" and "FAIL"
3. Select "FAIL" using the down button
4. Press P button

The sensor terminal will turn off all LEDs then it will show "DFU" on the display for 2 seconds and then will restart itself for a new power-up.

**WARNING:**
- If you press the button for more than 10 seconds it will be automatically turned on.
- The reset operation will make the display show the "selected output value".

### 4.4. - Key-down function when the instrument is in Auto mode

The key-down function can be programmed by (1) the "calc" button during "RUNNING" parameter.

**COMPLETE MODE**
- It allows you to show the "Direct set point configuration" dial.
- It allows you to display the "additional informations" (see below).

**KEY DOWN**
- To display the factory default parameter set, proceed as follows:
  1. Press the MENUS button for more than 5 seconds
  2. The display will show "PASS" or "FAIL" followed by a number. The number is the current power-up applied to the process. The "WF" shows you the action in a Cooling action.
  3. Press P button again. When the programme is running the display will be "No DFU" and the parameter currently performed and the event shown as follows:

where the first digit can be 1 to 5 or 6 for a 6, the next digit the number of the section (e.g. 33 indicate stages 3 and 2) and the last two significant digit  shows the status of the two event shown:

- Over-range
- Under-range
